x Emerging evidence suggests that changes to cellular metabolism can regulate epigenetic modifications to alter gene expression. Recently in Nature, Wu et al. show that the metabolic regulator AMPK can phosphorylate and thus stabilize the epigenetic modifying enzyme TET2, defining a novel signaling link between metabolism and the epigenome.

Plants are mainly multicellular, predominantly photosynthetic eukaryotes of the kingdom Plantae. Historically, plants were treated as one of two kingdoms including all living things that were not animals, and all algae and fungi were treated as plants. However, all current definitions of Plantae exclude the fungi and some algae, as well as the prokaryotes (the archaea and bacteria).

Plant embryogenesis is a process that occurs after the fertilization of an ovule to produce a fully developed plant embryo. This is a pertinent stage in the plant life cycle that is followed by dormancy and germination. The zygote produced after fertilization, must undergo various cellular divisions and differentiations to become a mature embryo. An end stage embryo has five major components ...
