1. Introduction. With the development of critical Internet technologies, the vision of computing as a utility took shape in the mid 1990s. These early efforts on Grid computing typically viewed hardware as the primary resource. Grid computing technologies focused on sharing, selection, and aggregation of a wide variety of geographically distributed resources.

Fig. 1 depicts the common phases of a traditional analytics workflow for Big Data. Data from various sources, including databases, streams, marts, and data warehouses, are used to build models. The large volume and different types of the data can demand pre-processing tasks for integrating the data, cleaning it, and filtering it.

A rainbow table is a precomputed table for reversing cryptographic hash functions, usually for cracking password hashes. Tables are usually used in recovering a password (or credit card numbers, etc.) up to a certain length consisting of a limited set of characters. It is a practical example of a space-time tradeoff, using less computer processing time and more storage than a brute-force ...

References. 1 "By the time it reports back, in about five years, the next set of results from the LHC should help settle on a conceptual design for a machine that might be built anywhere. From there another five years to complete a detailed design, choose a site, and secure international approval and financing. And with 10 years to build and install the equipment, it might just be feasible to ...
