### **Earthworm Ecology - link.springer.com**

There was no significant effect of earthworm treatment on the biomass of *M. brassicae* larvae. However, highest larval mortality occurred in microcosms without earthworms, while the proportion of larvae that had reached the final instar was lowest.

### **Potential effects of earthworms on leaf-chewer performance**

A square yard of cropland in the United States can contain from 50-300 earthworms, or even larger populations in highly organic soils. A similar area of grassland or temperate woodlands will have from 100-500 earthworms. Based on their total biomass, earthworms are the predominant group of soil invertebrates in most soils.
