A differential equation can be homogeneous in either of two respects.. A first order differential equation is said to be homogeneous if it may be written $(y') = f(x) + g(y)$, where f and g are homogeneous functions of the same degree of x and y . In this case, the change of variable $y = ux$ leads to an equation of the form $u'x + u = f(x) + gu$, which is easy to solve by integration of the two members.
